

Yuni Wu

South San Francisco, CA

yunihsuanwu@gmail.com — (720) 487-5403 — linkedin/wih — github/yuni-wyx — portfolio

Summary

AI systems engineer focused on agentic workflows, tool routing, planning workflows, evaluation pipelines, response synthesis, evidence aggregation, FastAPI systems, event-driven architectures, monitoring, and reliability.

Technical Skills

Languages: Python (advanced), SQL, Go, TypeScript, R

AI Systems: agentic workflows, tool routing, planning workflows, execution pipelines, response synthesis, evidence aggregation, traceability

LLM Evaluation: prompt optimization, response analysis, feedback-driven evaluation loops, A/B testing, evaluation pipelines

Backend & Systems: FastAPI, REST APIs, distributed systems, asynchronous processing, event-driven workflows, streaming workflows

Cloud & Reliability: Cloud Run, Pub/Sub, BigQuery, Cloud Storage, Docker, monitoring, observability, structured logging

Projects

Stock Intelligence Copilot — Agentic Stock Research Platform

[demo]

- Designed a FastAPI/Next.js agentic research platform that unified fragmented financial research workflows across market data, fundamentals, news, earnings, and portfolio signals into traceable multi-step analysis.
- Developed agent execution pipelines for intent classification, planning, tool routing, evidence aggregation, and response synthesis across financial research and portfolio analysis workflows.
- Implemented FastAPI-based streaming workflows and structured execution schemas that improved traceability, debugging, and observability across analytical tasks.
- Integrated market data, fundamentals, news, and earnings tools into evidence bundles with per-tool error capture and fallback-safe API presentation.

EmotionFlow — LLM-Based Recommendation System

[demo]

- Built LLM evaluation and prompt optimization workflows for real-time recommendation and response quality analysis.
- Reduced hallucination by 34% through feedback-driven evaluation loops using user preference signals and response analysis.
- Increased recommendation acceptance to 57% through A/B testing and iterative prompt optimization.

NailAI — Serverless AI Microservice Platform

[demo]

- Built event-driven AI inference workflows using Cloud Run, Pub/Sub, and Cloud Storage for scalable asynchronous processing.
- Achieved 0% failure at 200 concurrent users with idempotent orchestration, retry handling, and Pub/Sub job routing.
- Designed request, job, and prediction metadata pipelines for querying, monitoring, and downstream analytics.

AuraFlow — Local-First Personal Planning Platform

- Created a Next.js/TypeScript local-first planning platform that centralizes inventory, routines, and preferences into reusable context.
- Implemented context-aware planning workflows that retrieve user profile, inventory, and routine context before applying deterministic rules to generate personalized recommendations.

Experience

Software Engineer

June 2021 – Aug 2022

Shopee Co. Ltd.

- Engineered validation and anomaly detection systems across 800+ production scenarios, reducing manual QA workload by 80%.
- Built data quality monitoring pipelines to detect regression anomalies and surface near real-time reporting inconsistencies, accelerating issue detection by 78%.
- Optimized distributed ETL workflows and GCP data access patterns, reducing query latency by 15%.

Machine Learning Engineer Intern

May 2025 – Aug 2025

MyEdMaster LLC

- Implemented monitoring, regression validation, and structured logging workflows for Cloud Run inference evaluation.
- Analyzed Cloud Run inference architectures with Docker and Cloud Storage-backed asynchronous processing to assess deployment tradeoffs.

Education

University of Colorado Boulder, MS, Data Science GPA: 3.76/4.0

May 2026

Soochow University, BS, Data Science GPA: 3.7/4.0

June 2021
