Summary

AI Systems Engineer with a background spanning backend engineering, data systems, and applied machine learning. Focused on building traceable AI workflows through tool routing, evaluation loops, observability, and automated testing so teams can ship reliable AI-enabled products with clear evidence and failure handling.

Technical Skills

Languages: Python, SQL, Go, R, TypeScript

AI Systems: LLM workflows, tool routing, intent classification, planning, response analysis, prompt optimization, evidence bundles

Evaluation: feedback-driven evaluation loops, A/B testing, model evaluation, benchmarking, ROC-AUC, F1-score, calibration

Backend & Data: FastAPI, REST APIs, Next.js/TypeScript workflows, PostgreSQL, BigQuery, metadata pipelines, schema validation

Cloud & Reliability: Cloud Run, Pub/Sub, Cloud Storage, Docker, async processing, logging, observability, automated tests

Experience

Graduate Research Assistant

Sept 2025 – May 2026

CAIRO Lab, University of Colorado Boulder

- Engineered ROS/rosbag data pipelines to curate 97K+ Unitree Go1 state-action samples for reproducible evaluation datasets.
- Benchmarked behavior-cloning policies across autonomous navigation and human-interaction scenarios.
- Evaluated VLM-guided navigation strategies for decision consistency, semantic understanding, and deployment robustness.

Machine Learning Engineer Intern

May 2025 – Aug 2025

MyEdMaster LLC

- Built a 22-class classification workflow on 50K+ samples, achieving 0.92 F1-score through repeatable evaluation.
- Implemented monitoring, regression validation, and structured logging workflows for Cloud Run inference evaluation.
- Evaluated deployment tradeoffs through ablation workflows, reducing inference latency by 5x from 0.15s to 0.03s per image.

Software Engineer

June 2021 – Aug 2022

Shopee Co. Ltd.

- Engineered SQL validation and anomaly-detection pipelines for 800+ production scenarios, reducing manual QA by 80%.
- Built regression monitoring pipelines to surface data inconsistencies faster, accelerating reporting speed by 78%.
- Optimized distributed ETL workflows and GCP data-access patterns, reducing query latency by 15%.

Projects

Stock Intelligence Copilot — AI Research Workflow Platform

[demo]

- Built FastAPI/Next.js workflows combining market data, fundamentals, news, earnings, and portfolio signals.
- Orchestrated intent classification, planning, tool routing, evidence aggregation, and response synthesis across research workflows.
- Implemented streaming workflows and structured execution schemas to improve traceability, debugging, and observability.
- Expanded automated tests across runtime execution, tool contracts, route adapters, portfolio scenarios, and streaming behavior.

EmotionFlow — LLM Evaluation and Recommendation Quality System

[demo]

- Designed LLM evaluation and prompt optimization workflows for real-time recommendation and response quality analysis.
- Reduced hallucination by 34% through feedback-driven evaluation loops using preference signals and response analysis.
- Increased recommendation acceptance to 57% through A/B testing and iterative prompt optimization over output-quality signals.

NailAI — Cloud-Native AI Processing Platform

[demo]

- Built Cloud Run, Pub/Sub, and Cloud Storage workflows for asynchronous image processing and retry-safe orchestration.
- Designed BigQuery metadata pipelines for request, job, and prediction tracking across monitoring and analytics workflows.
- Achieved 0% failure at 200 concurrent users with p95 latency of 6.8s through idempotent orchestration and retries.

Education

University of Colorado Boulder — MS, Data Science | GPA: 3.76/4.0

May 2026

Soochow University — BS, Data Science | GPA: 3.7/4.0

June 2021
